

## Umeå Meeting June 12-14, 2018

The second meeting of the Glycolmaging network (ETN) took place in Umeå, Sweden. During this meeting the different partners were able to discuss their ongoing work, share their experiences and establish further collaborations. The meeting was spread over three days and was divided into two parts. In the first part a review of the project was held. Each representative of the partners and each ESR presented their results. This was followed by a discussion leading to new insights and ideas to improve the current techniques. The second part included a tour through the University of Umeå together with information about different research centers present at the university. In addition, a team building event was organized in which communication, team work and coordination were emphasized.

## Rafting in Västerbotten

Rafting was the activity that was chosen for team building. The team travelled by bus through northern Sweden. The peaceful and charming views made the trip through the beautiful nature of Sweden an unforgettable experience. Upon our arrival, we received appropriate equipment (paddle, life jacket, helmet and wetsuit) and safety information. Then we were divided into two groups, we entered the raft and started our adventure. Useful techniques and commands were learned at a peaceful part of the river Trollforsen. When we mastered the techniques and were able to work in team, we were brought to the adventurous part of the river. Leading to a memorable experience full of laughter and fun. After our adventure, the Glycolmaging team enjoyed local prepared dinner around a bonfire in an idyllic small wooden house.
