

## Proteomics & Glycomics workshop in Copenhagen, Denmark, April 1-3, 2019

The workshop “Proteomics & Glycomics” was hosted by Copenhagen Center for Glycomics, Copenhagen University, Denmark. In this workshop the early stage researcher from both Glycolmaging and BioCapture projects participated. The aim was to give early stage researchers an insight in quantitative proteomics, PTM analysis and glycomics. Researchers from University of Southern Denmark and Copenhagen Center for Glycomics introduced the field and presented the work. The first day ended with a nice sushi dinner for all the participants at the 10<sup>th</sup> floor in the Mærsk Tower, which gave a good foundation to interact with each other and a wonderful view of Copenhagen. The workshop was completed with a business development meeting where people from the industry inspired the early stage researchers to make the best business plan.

After an interesting and rich workshop, a review meeting was held. During the meeting, which was attended by Glycolmaging members only, the progress, future focus points, and mid-term meeting were discussed.
