

Summer school at BAM, Berlin, Germany, August 26-28, 2019

The ESR Summer School 2019, organized by BAM, was a 3-day long Workshop for the ESRs of both the Glycolmaging and Biocapture project. Dr Pauw B started the first day with a lecture on the topic 'The dark-side of Science'. The other part of the first day was covered by Dr Spangler. She gave an intense course on scientific writing, which aimed to improve the skills in Academic and Scientific English writing. The course dealt with topics such as common forms of communication, scholarly genres, questions of style, professional courtesies, and common errors. The second day was a full-day course about Employability Skills, given by Mr Kapanen. During this course several topics were covered regarding career planning and job searching, conducting an effective job search, and succeeding in employment. Small exercises and group work made the course interactive. The third day started with the second part of the Academic and Scientific Writing course, where detailed feedback was given on work produced in the course. In the afternoon we all went for a boat trip at the Müggelsee. With a nice BBQ, music and drinks, the ESR Summer School 2019 was brought to an end.
